responses.py - How We Say What Is True

What this file does (big picture)

responses.py is the agent's voice.

Pipeline:
1) Build a factual draft from OrderHelpFacts or Snippets (templates)
2) Ask ai_client to rewrite that draft more warmly (grounded generation)
3) If AI is off or fails, keep the clear template wording

This is RAG-style generation: retrieve facts elsewhere, generate wording here.
Guardrails in main.py still check the final draft.

Rule: never invent facts. Sleep disclaimer is attached outside the AI rewrite
so the model cannot drop it.

New words you will see in this file

template fallback	Safe clear wording used when AI is disabled or errors.
warm rewrite	AI rephrases facts into friendlier customer language.
grounding	The model is only allowed to use the FACTS block we send.
system prompt	Standing instructions (persona + hard safety rules) for the model.
temperature	Lower values keep replies steadier and less inventive.

Flow while the program runs

facts -> _template_* draft -> _warm_rewrite via ai_client.complete ->
optional disclaimer prepend -> main apply_output_guardrails.

responses.py - How We Say What Is True

1-16

```
"""Customer-facing response writer..."""
```

Plain English:
Docstring now describes template + AI warm rewrite + fallback.

21-33

```
imports ai_client + fact modules
```

Plain English:
Needs ChatMessage/get_ai_client for generation; orders/knowledge for fact types.

35-50

```
_SYSTEM_PROMPT
```

Plain English:
Hard rules for the model: only use facts, no diagnosis/prescriptions/refund promises.

53-57

```
_warm_rewrite_enabled()
```

Plain English:
Reads AI_WARM_REWRITE from .env (default true).

60-88

```
def _warm_rewrite(facts_text, ...)
```

Plain English:
Calls the AI with system+user messages. On AiClientError, returns the factual draft unchanged.

91-122

```
_template_order_help / _order_fact_card
```

Plain English:
Deterministic order wording built only from OrderHelpFacts.

125-128

```
def render_order_help(...)
```

Plain English:
Public API: template then warm rewrite, with optional customer question for context.

131-168

```
knowledge templates + render_knowledge_help
```

Plain English:
Builds sourced facts, warms them, then forces SLEEP_DISCLAIMER outside the AI path when needed.

171-216

```
account / returns / escalation renderers
```

Plain English:
Same pattern: template facts/phrasing, then optional warm rewrite.

219-250

```
def render_from_facts(...)
```

Plain English:
Single entry point by kind; now also accepts question for better AI context.
