knowledge.py - Retrieve Approved Facts

What this file does (big picture)

knowledge.py is the agent's library card for *facts*, not final wording.

Business jobs:

1) Load documents and split them into titled sections
2) Find the sections that best match a customer question
3) Hand those Snippet facts to responses.py to say them aloud

This is the R in RAG (Retrieval). responses.py is (today) the simple writer;
later an AI can rewrite the same snippets into natural language.

New words you will see in this file

markdown	Plain text with light formatting. # is a document title, ## starts a section.
retrieval	Finding the most relevant text for a question - the R in RAG.
stopwords	Words like 'the' and 'is' that are too common to signal meaning.
set	An unordered collection with no duplicates. & gives the overlap of two sets.
scoring	Turning 'how relevant is this?' into a number so sections can be ranked.
Snippet	One factual section ready for responses.py to communicate.

Flow while the program runs

Customer question -> _words() -> _load_snippets() -> search_knowledge() scores
(prefer_file can favor a document) -> list[Snippet] -> responses.render_knowledge_help.

knowledge.py - Retrieve Approved Facts

1-14

```
"""Knowledge base... retrieves; responses.py writes..."""
```

Plain English:
Module docstring: retrieval only. Customer language moved to responses.py.

16-20

```
imports: re, dataclass, Path
```

Plain English:
Pattern matching for words, a typed container for sections, and safe file paths.

22-23

```
PROJECT_ROOT and KNOWLEDGE_DIR
```

Plain English:
Locate data/knowledge/ relative to the project root.

25-30

```
STOPWORDS = { ... }
```

Plain English:
Common words ignored when scoring matches.

33-40

```
@dataclass class Snippet:
```

Plain English:
Fact unit: document, section, content, source_file (for citations).

43-46

```
def _words(text)
```

Plain English:
Normalize text into a set of meaningful words.

49-77

```
def _load_snippets()
```

Plain English:
Read every .md file and split on ## headings.

80-113

```
def search_knowledge(...)
```

Plain English:
Score sections, optionally prefer one file, return the best Snippet facts. No customer prose here.
